

Key Mastery for BiLock

Key Mastery™ for BiLock is powerful software for creating BiLock and Series Six master key systems and managing client records.

Key Mastery™ for BiLock is custom designed to allow for specialised coding of the BiLock 8 and 12 pin cylinders. This makes the design and coding of BiLock key systems easy, while offering full control over key system design as codes are generated to your specifications. Unsurpassed key system security is ensured as codes are backed by an automatic phantom check with the ability to minimise master pins if requested.

Existing key systems are easily entered into Key Mastery™ using predictive data entry features contained within the package.

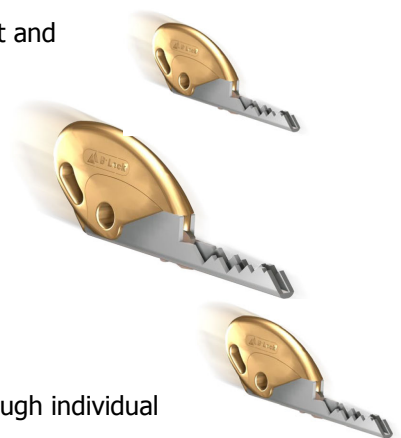

Client records are comprehensively managed within Key Mastery™ as client and key system details are at your finger tips. Enjoy digital signature display and a full history of all keys cut, changes made and authorisation given.

Clear keying and pinning charts are generated for internal use, along with attractive key system reports for your clients. Key Mastery™ allows you to save any report in PDF ready for email.

Sensitive information contained within Key Mastery™ is also protected through individual log in names and passwords where you decide the access rights for each software user.

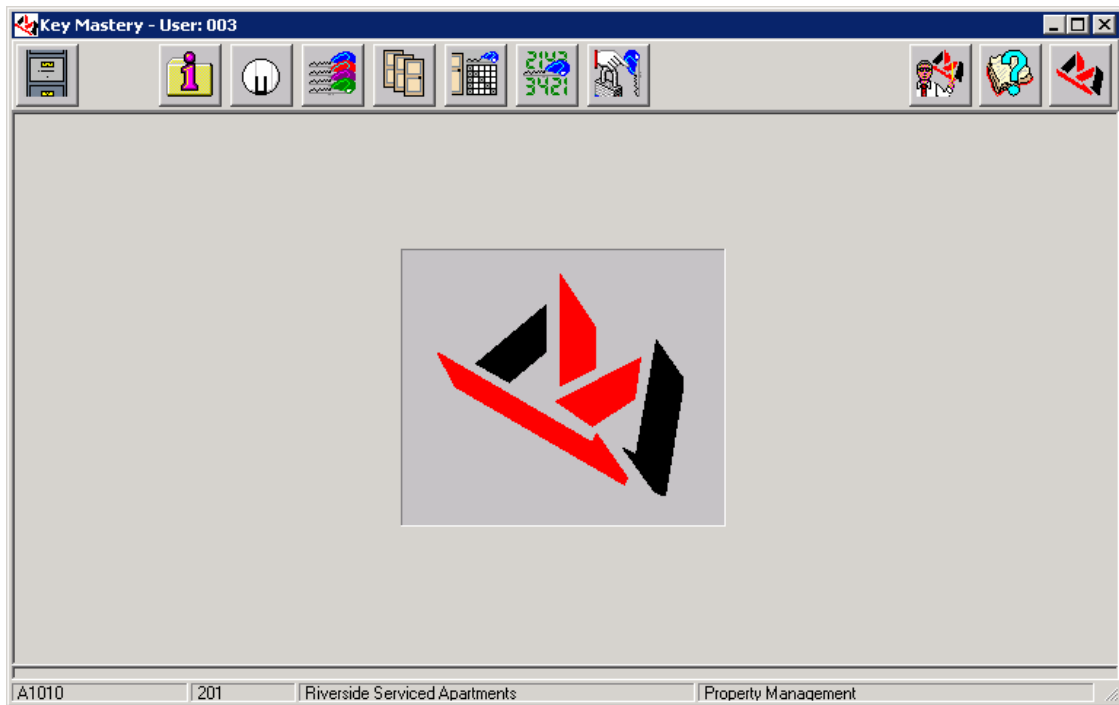

Key System Modifications

Once your key system is created, maintaining it is easy. The same Key Mastery™ toolbar allows fast access to any part your key system for fast viewing and modification. Quickly complete key orders, rekey doors and locks, or expand a key system.

Creating a New Key System

In Key Mastery™ the design of BiLock and Series Six master key systems is completed in 7 seven easy steps. The customised BiLock toolbar at the top of every screen allows quick creation, viewing or modification of your key system.

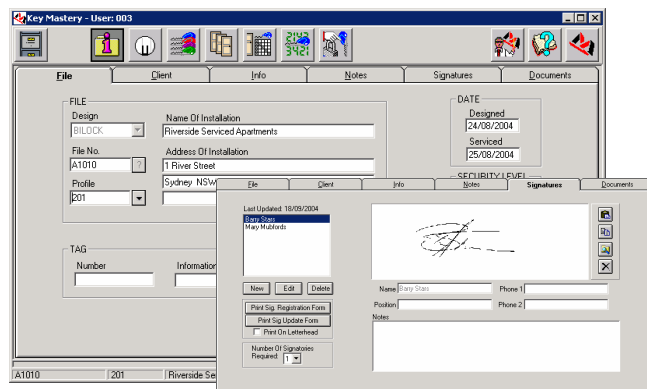

1

Client and project details

Enter client and project details including contact information, scanned signatures, additional notes and scanned documents.

2 System Profile

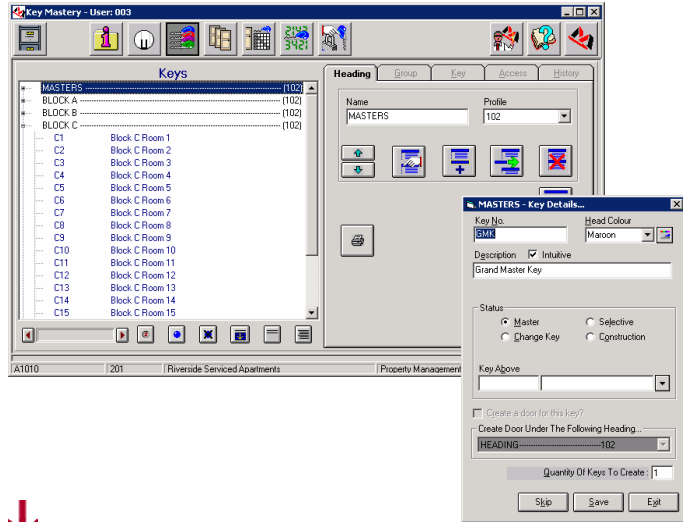

Add additional profiles for Series Six multi-profile systems only.

3 Keys

Create the high level keys in your project.

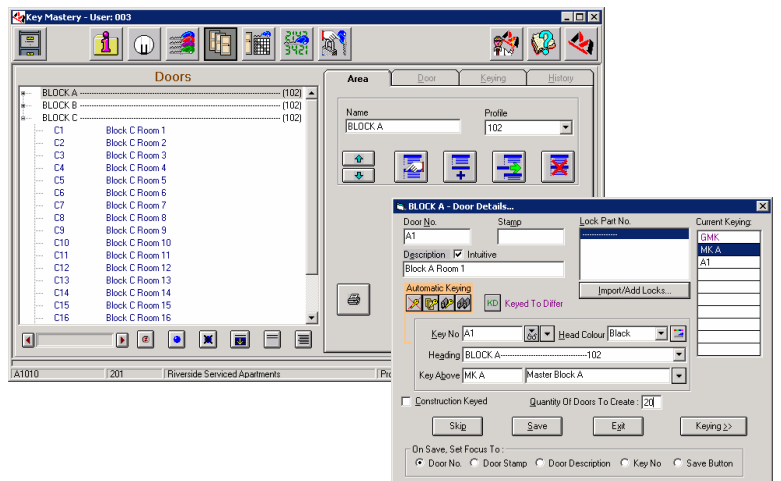

4 Doors

Create project doors or groups of doors at once. Add keying at same time.

Create keys while creating doors for keyed alike and keyed-to-differ doors.

Record door hardware for future maintenance records.

5

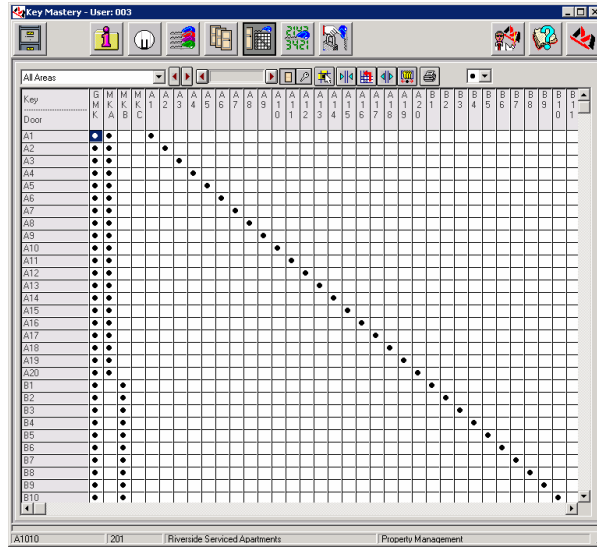

Keying Chart

Total system matrix for key allocation, viewing and modification.

Key access is simply cross referenced with the doors and ticked if it corresponds.

Print key system reports for clients here.

6

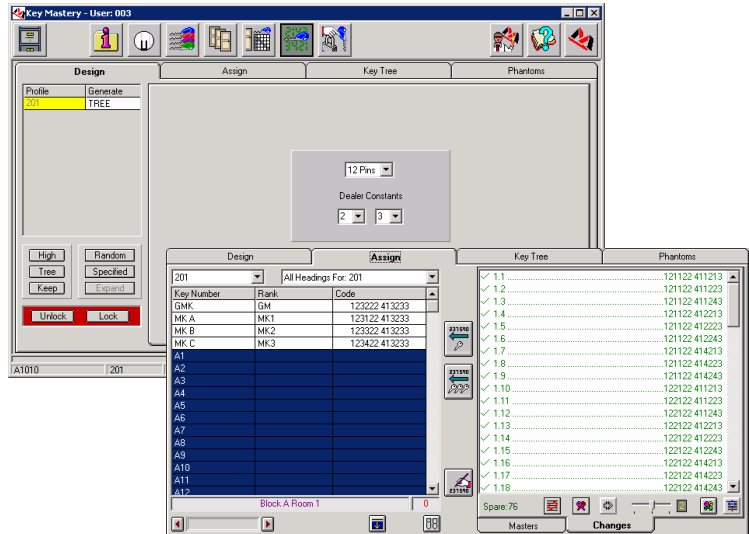

Code Design

Add your unique agent dealer constants and choose 12 or 8 pin cylinders (or a mixture of both for multi-profile systems).

From here coding generation is easy. Enter your own high level codes or allow the software to randomly generate every code for you.

Assigning codes to keys is as simple as the click of a button for high level keys. Low level keys are assigned hundreds at a time.

7

Order Processing

Enter all key and door orders, generate key cutting and pinning charts and summary of parts required. Check signatories.

The screenshot shows the 'Key Mastery - User: 003' application window. It features a table of key orders with columns for Key Number, Description, Colour, Total, and Order. Below the table are various control panels including a numeric keypad, a 'Test Key' button, and a 'Process' section with fields for Date, Job Number, Authority, Client Order Number, and Processed By. There are also options for 'Print' and 'Export'.

Key Number	Description	Colour	Total	Order
GMK	Grand Master Key	Maroon	0	4
MK A	Master Block A	Blue	0	3
MK B	Master Block B	Blue	0	3
MK C	Master Block C	Blue	0	3

Key Mastery™ at Australian Lock Company

Australian Lock Company use Key Mastery™ and Doors™ together to streamline their quoting and key system design processes.

Key Mastery has been used for over ten years at Australian Lock Company. "It is used to create our factory built master key systems," says Rod Roberts, Australian Lock Company's Keying and Assembly Supervisor. "We have thousands of key systems to manage so I use Key Mastery™ on a daily basis. The software allows us to code the master key systems, process key orders along with anything else clients require including system expansions and re-keying," says Rod.

"The Key Mastery™ Labels module is also great for labelling the keys and locks as they leave the factory as it helps our customers when fitting the locks on site or issuing the keys," says Rod. "Our master key systems are sometimes transferred to our BiLock agents for them to take over and manage. So if they also use Key Mastery™, we can give them the electronic file to import which saves them hours of manually re-entering the key system details."
